Plan your way of living	40-43

There is nothing you could add to your home that will make a more welcome difference than a **BROSELEY STOVE**.

Just the sight of the shimmering embers and bright flames will make you especially glad to be home. Then feel the warmth filling the room, and relax in style. Your Broseley stove provides more than a cosy centrepiece to your living space. Fashioned in either cast iron or steel, it is an object of singular beauty in itself.

Not only will it change your life, but fit in with your way of living. Whether your taste is contemporary, traditional or your own personal mixture; there's a stove to match from the Broseley collection. Nobody offers a wider choice of woodburning, multifuel, electric or gas stoves in solid cast iron or steel.

Each type of fuel has its special advantages in terms of convenience, efficiency, environmental quality and natural character. What they share is a timeless finish that enables your stove to make itself at home in town or country for generations.

Visitors will comment - "You've got a stove", but you'll know better than that. You've invested in a Broseley stove.

# Broseley. For your way of living.

**the multifuel way**

What you see through the stove window is a natural fire and what you feel throughout the room is soft radiant heat. These stoves are the highest in heat output and green credentials in the Broseley range, and so efficient most are approved for use in Smoke Control Areas.

**the electric way**

The stove in its most convenient form – that's the electric option. Summon up silent heat at the touch of a button; or simply enjoy the flickering, realistic flame effect if the weather's warm or the central heating is on. There's no need for a flue. It can be installed instantly.

**the gas fired way**

The gas fired range of stoves combine ease of control with enough output to heat a room effectively thanks to the sturdy construction and the efficiency of the burners. And those flames you see coaxing the coals or logs into a blaze – they're real.

# The pleasure of choosing...

**Look** There are a few things you really need to see at first hand and to touch in order to appreciate their true nature. A Broseley stove is one of them. That is why we recommend you visit a local showroom of a Broseley Authorised Stockist. Here you can have the pleasure of examining and comparing these pieces of technology, understand how they work and picture how agreeably they might fit in with your lifestyle.

**Fit** Both multifuel and gas fired stoves require a flue. It could be an existing chimney. But certain stoves are capable of being fitted against an outside wall. Installation is a specialist business. That's why we recommend using a HETAS approved or Gas Safe engineer who will assess whether any changes are needed to your fireplace or chimney before installation. If you want your stove to be up and running instantly, consider going electric. A socket is all you really need.

**Listen** A stove is probably a world apart from anything else you've ever bought. That's why it's important to get expert advice on which model is suitable for your home. A pre-sales visit will verify what's right for the room you have in mind. You'll also get to know the correct fuel to use, how to control its operation for warmth and economy and how to clean and care for your new prized possession.

**Relax** Real flames bestowing a cosy ambience, but with over three times the heating efficiency of an open fire – that's the difference a Broseley multifuel or gas fired stove makes to a room. An electric stove will provide warmth to complement your central heating, and you can delight in the flame picture by itself. So what are you waiting for? Gather round.

# the perfect stove

# Better for the world out there...

## THE ENVIRONMENTAL CHOICE.

That's what you make when you burn wood in a Broseley stove - *good for the planet as well as great for the home.*

NATURAL

RECYCLABLE

SUSTAINABLE

Not only is wood a renewable fuel, the CO<sup>2</sup> which wood emits when it burns is balanced by the CO<sup>2</sup> the tree has absorbed over its lifetime. This makes it carbon neutral.

As conventional fuel costs continue to rise and environmental regulations tighten, your Broseley stove will become an asset of ever increasing value. That's why as you relax in the rosy glow you can quietly pat yourself on the back for being both environmentally responsible and financially shrewd.

### MULTIFUEL

The majority of us live in smoke control areas as defined by the Clean Air Acts. Here you can only use solid fuel heating appliances which have passed the tests set by the Department for Environment Food and Rural Affairs, DEFRA. So efficiently do Broseley stoves convert wood into heat, the majority bear the Smoke Exempt Seal (SE).

### GAS AND ELECTRIC

Broseley gas fired stoves employ some of the most efficient gas engines in existence. We should know; we pioneered them. With a 5kW gas stove to heat a room there's no need to keep the central heating on, minimising household fuel consumption. Electricity is clean energy. But unlike any other fuel it's 100% efficient and you get the full benefit of every unit used.

# ...and your world in here

# Enter a world of living warmth the **multifuel** way

GENEROUS, WELCOMING, ROMANTIC, AND BEAUTIFULLY DESIGNED – you're sold on the dream of a life with a BROSELEY multifuel stove.

Whilst a woodburning stove caters only for well seasoned wood and cannot burn other forms of fuel, our multifuel stoves are capable of burning wood or smokeless fuels – typically coal. A grate ensures a current of air sweeps beneath the coals and allows wood to burn on a flat surface, building up to a bed of embers. A Broseley multifuel stove offers you the flexibility of choice.

But how easy are they to run and live with? Operation is simple. A control regulates the air flowing through a vent into the fire chamber. Open it to summon up a blaze. When you're happy with the room temperature, you can turn the fire down to a controlled burn rate.

The secret of its efficiency is a system of ducts that direct different airflows around the interior. Primary air brings in air up from beneath the grate. Secondary air is deflected down the glass sending a curtain of air to burn off any particles that could obscure the view. With this airwash technology to keep it clean, there's no need to clean it yourself.

# HEREFORD 5 SE

## 5kW MULTIFUEL STOVE

Its sleek steel body with cast door and arched window allows the HEREFORD to sit comfortably in settings and spaces with an eclectic mix of old and new.

With strength and elegance, the panoramic flame picture of this British built stove radiates a cosy ambience for you to enjoy.

# HEREFORD 7 SE

7kW MULTIFUEL STOVE

The British manufactured Hereford 7 SE is an impressive stove designed with clean lines and bold detailing, with the potential to create a unique centrepiece in any living space. Enjoy the flames to the full through the broad arched window of the cast door.

# SERRANO 5 SE

## 5kW MULTIFUEL STOVE

With an output of 5kW and the infinitely adaptable looks which characterise the whole Serrano range, the SERRANO 5 SE has the power to transform the look and feel of rooms in the size and style of house where most of us live. You can see why it's a favourite.

# SERRANO 7 SE

7kW MULTIFUEL STOVE

Everything about the SERRANO 7 SE is expansive. Its hefty 7kW heat output will radiate warmth around every cubic metre of the largest spaces, making it especially welcome in rooms which are open plan or where a wall has been removed between two rooms to create a spacious living area. So panoramic is the flame picture through the arched window, you can revel in the ever changing display from any corner.

# SERRANO 5 SE LOG STORE

5kW MULTIFUEL STOVE

The best way to appreciate what this tall new member of the Serrano family adds to home life is to sit back in front of it. Normally you look down into a stove's embers and fire bed, but because the SERRANO 5 SE with log store is raised you can see amazing wisps of flame flickering around the top of the interior. Endless fascination.

# SERRANO 7 SE LOG STORE

7 kW MULTIFUEL STOVE

The statement which the broad shouldered SERRANO 7 SE makes is all the more magnificent with the integral log store. It combines impact with convenience. Not only does its considerable capacity mean fewer trips to fetch wood from outside, the grain and growth rings on the cut ends of the logs and the pattern they form stacked together add a satisfyingly natural design element.

# WINCHESTER

## 8kW MULTIFUEL STOVE

The WINCHESTER is glorious whichever way you look at it. That's because in addition to the window commanding your gaze from the front, it also has windows faceted at an angle down either side. So even in the widest room no one sitting at an angle to the stove will be deprived of a comforting glimpse of firelight. Its powerful presence is supported by a heat output approaching 9kW at an efficiency rate of 83%, one of the best around - one of the many reasons it's enormously popular.

# SILVERDALE 5 SE

5kW WOODBURNING STOVE

The compact design of the Silverdale 5 SE simply adds to its charm. With subtle design touches, this sleek steel woodburner will be at home with any interior, be it modern or traditional. Finished in a subtle matt black with a modern chrome handle the Silverdale blends aesthetic appeal with ambience.

# SILVERDALE 7 SE

7kW WOODBURNING STOVE

The Silverdale 7 SE boasts all the delights of the 5 but with a large panoramic viewing window and generous 7kW output. This stylish woodburning stove offers an impressive heating performance, airwash technology to keep the glass clear and a choice of top or rear flue exits.

# YORK MIDI SE

## 5kW MULTIFUEL STOVE

When you introduce the YORK MIDI SE into a room, you are adding an item of furniture that will stand comparison with some of your prized possessions. Witness the Regency legs and the architectural references around the top.

The difference with this piece of furniture is that it comes to life - bestowing light and warmth all around your room.

# YORK GRANDE SE

7kW MULTIFUEL STOVE

As the name suggests, the YORK GRANDE SE has the power to circulate natural warmth around a good sized room. Yet it balances strength with elegance, thanks to those delightful embellishments cast into the iron. Raised on elegant legs, the YORK GRANDE SE echoes traditional furniture.

# PHOENIX

## 8kW WOODBURNING STOVE

With a large viewing window and contemporary design the scene is set for the PHOENIX to take centre stage.

This elegant steel structure with metallic black finish, integrated log store and 8kW heat output is a splendid choice for your home.

Hercules 20

# HERCULES 20 & 30

5.5kW & 8kW  
MULTIFUEL BOILER STOVES

Working with your central heating system to keep the whole house cosy, the HERCULES 20 provides 5.5kW heat output whilst the HERCULES 30 provides a generous 8kW output. These powerful stoves will not only radiate heat around the largest rooms, but will also power a central heating and hot water system.

Hercules 30

# SNOWDON 26

## 10kW WOOD BURNING BOILER STOVE

The sturdy SNOWDON 26 has an imposing presence. With its double doors and greater width, it presents an expanse of blazing wood within an open hearth.

It can be easily integrated with either the unvented (combi boiler) system or the traditional vented system with water tanks. It will throw out 10kW worth of heat directly, enough for a room of considerable size, and contribute a full 16kW to a hot water system.

# SNOWDON 30

## 8kW MULTIFUEL BOILER STOVE

The SNOWDON 30 is the most powerful stove in the range, and it has a mighty task to perform – not only to bathe even the largest room with warmth and glowing ambience, but to power the whole of a home's central heating and hot water system.

It fulfils its role magnificently. That's because within its solid cast iron structure is a steel wrap-around boiler which harnesses the extra available heat to distribute around your home, providing 8kW of heat into the room and 22kW into the hot water system.

# How to add traditional values

# in an instant the electric way

When we first decided to power a cast iron stove with electricity, we had in mind people with a fireplace or space for a stove who desired that traditional look. But with total convenience.

With an electric stove there's no need for a flue. You can safely sit a stove directly on to a level surface such as a wooden floor; the only installation required is plugging into a socket.\* It will convect 1kW or 2kW of heat into the room, thermostatically controlled for lasting comfort. You even have the option of enjoying the glow without the heat any time of year. What sets Broseley electric stoves apart is their innovative design and the authenticity of the visual effect. We have perfected lighting technology to emulate the flames, the shimmer and smoulder of a real woodburning stove to the last detail. To get the effect just right, you can arrange a selection of the artificial logs and real polished anthracite coals just as you please.

*\*Electric stoves with cast doors should be secured to the floor.*

# HEREFORD 5

## 2kW ELECTRIC STOVE

The British built steel HEREFORD with cast door is the perfect addition to any modern or contemporary room. It comes with an optional spigot for attaching a dummy flue pipe if you so wish. The coal bed arrangement and distinguished flame pattern creates a truly magnificent display.

# HEREFORD 7

2kW ELECTRIC STOVE

The British manufactured Hereford 7 is an impressive stove designed with clean lines and bold detailing, with the potential to create a unique centrepiece in any living space. Enjoy the realistic flame effect to the full through the broad arched window of the cast door.

# CANTERBURY

## 2kW ELECTRIC STOVE

Choose the cast iron CANTERBURY for amazing adaptability. That classic look with subtle lines and pattern-work is just the start. It comes supplied with both hand-crafted artificial logs and a bag of polished pieces of anthracite. Arrange these how you will – all logs, all coals or a mixture. You also have a choice of door inserts: arched window (as standard), plain and arched lattice.

The CANTERBURY is slim in profile, enabling it to fit into shallow fireplaces - another side of its adaptability.

# LINCOLN

## 2kW ELECTRIC STOVE

The difference you notice with this cast iron stove is the centre-opening double doors with a traditional pattern. You can run the LINCOLN with them either closed or open for a change. You can also change the arrangement of the logs and coals. The LINCOLN is slimline to the extent of being only 275mm deep so it suits standard sized hearths and fireplaces.

# SERRANO

## 2kW ELECTRIC STOVE

The compact size and timeless styling would tempt you to place the cast iron SERRANO in the bedroom. In its electric version there's nothing to stop you. Plug in, switch it on and sit back to enjoy its restful, flickering ambience. Like all Broseley electric stoves, it's soothingly quiet. If tomorrow you fancy moving it to liven up the conservatory, that's your privilege.

# WINCHESTER

## 2kW ELECTRIC STOVE

With the artfully simulated flames visible from both left and right sides, the splendid WINCHESTER is just as much an all-round success in electric mode as woodburning or gas.

If you see an opportunity in a vacant corner or empty fireplace to make a bold statement, nothing could bring heat, light and sculptural dignity faster than the WINCHESTER.

# YORK

## 2kW ELECTRIC STOVE

Stand the YORK electric stove beside its woodburning twin and you won't see any difference. It even has an optional spigot for attaching a dummy flue pipe. Light them up and they're still amazingly challenging to distinguish. Sit back and bask in the peaceful, flickering flames encased in cast iron.

Another distinction is the door design. Woodburning stove doors all have plain glass, but with the YORK electric you can also opt for door inserts with latticework or gothic arch designs inspired by the Minster windows.

Come home to real heat from

# real flames the gas fired way

Broseley started life as innovative gas engineers. Around 25 years ago we pioneered a gas engine of such neatness and efficiency, it became our first choice of fuel.

Whether arising from hand crafted ceramic fibre logs or coals, the flame picture is remarkably reminiscent of the real thing. The heat is comparable in quality to the warmth radiating from our equivalent multifuel models. Although the output is slightly less, the extra convenience of gas more than compensates. Once the pilot is lit, the stove springs to life at your command. Thermostatic operation optimises fuel consumption; digital remote control\* gives you the freedom to change the view from blazing to smouldering and back.

Choose accurately to meet your needs, and you can find a stove that can fit into slim spaces, this is why the gas fired way could be the solution you've been seeking.

WINCHESTER	✓	✓	✓			✓		✓

# HEREFORD

4.7kW GAS STOVE

Built from steel with a matt black finish cast iron door, the HEREFORD is a striking addition to the Broseley range. With a large panoramic window and realistic log bed your room will be brought to life by the mesmerising flames.

The HEREFORD provides a generous 4.7kW heat output, encompassing the whole room with warmth.

# CANTERBURY

## 4.6kW GAS STOVE

Elegance crafted into cast iron, that's the CANTERBURY. Choose lattice or arched patterns under the wide curve of the window, or you can opt for plain glass enabling you to enjoy the full panorama of flames dancing on coals. Today's housing interiors demand slimline appliances and the CANTERBURY complies beautifully. Its proportions allow it to sit happily on a standard sized hearth and radiate all the heat a typical room requires for comfort and joy.

# LINCOLN

## 4.6kW GAS STOVE

The LINCOLN is distinctive for its double doors with Victorian detailing to frame the authentic flame picture. What will surprise you is that you can run the stove at full gas power with the doors open. Yet this is not an open fire.

For a slimline stove, the Lincoln has a 4.6kW output is more than adequate to heat a typical room.

# WINCHESTER

## 5.5kW GAS STOVE

Like its woodburning and electric counterparts, the noble WINCHESTER incorporates distinctive side windows so the beauty and warmth of the fire can be appreciated from all aspects of your living room. It also has the advantage of Broseley's own uniquely efficient gas engine to generate 5.5kW worth of warmth at 80% efficiency.

Digital remote control, choice of coal or log effect – what more do you need to make this obedient stove perfect for you in person.

# LOG BASKETS

We have developed the perfect accompaniment for any multifuel or woodburning stove; our log baskets are manufactured in the UK from 3mm steel, robust and strong enough for storing and displaying dried logs ready to use in your stove.

With a matt black finish these contemporary log baskets are an attractive fireside accessory. You may choose to use as a practical basket for fetching and storing wood from your outdoor store to maximise the enjoyment from your stove.

Our square basket features 'Broseley' and 'Logs' detailing, perfectly cut either side of the basket and our curved model allows easy stacking and storage of logs.

### AFTERCARE

Annual servicing and chimney sweeping is a must for multifuel, woodburning and gas stoves to keep them in top working order. Only ever clean the surface of your stove when it is cold, using a soft brush. A slightly damp lint-free cloth can be used for stubborn stains but ensure surfaces are dried immediately. Your stove’s high temperature paint will lighten over time through natural ageing. You can re-paint or touch up your stove with a recommended paint from your stove retailer who can also supply any replacement parts and spares.

### WARRANTY

Gas and electric appliances carry a 12 month warranty which covers any manufacturing faults. It is important to note that a number of components in your stove are classed as consumable and therefore will need to be replaced from time to time (consumable parts include grates, firebricks and rope. Also includes bulbs in electric stoves.) Glass does not carry any form of warranty, this is because the glass can only break through mechanical impact. Most multifuel and woodburning stoves come with a 5 year warranty\*

\* Silverdale 5 SE, Silverdale 7 SE, Hercules 20, Hercules 30 come with a 2 year warranty.
