Firebelly stoves ensure they look at home in any interior
whilst creating a great ambience when the stove is burning

Installation

Stove Installation

Stove installation is covered by building regulations document J.

Firebelly recommends your stove is installed by a Hetas registered installer.

This details many regulations that you must adhere to when installing a stove, flue system or chimney as well as various recommendations and good practices.

The Firebelly Stoves Installation teams are registered under the HETAS competent person's scheme for carrying out all necessary work for the correct installation of your flue and appliance in accordance with document J.

Firebelly Stoves can offer a full design and Installation service to meet your specific requirements. The work we undertake includes full chimney design and build if required, Chimney lining for aged and worn chimneys or the Installation of a new Class 1 Insulated flue system, Interior or Exterior if required.

Prior to you ordering your preferred Firebelly Stove we can undertake a site survey at your property to advise you on the ideal stove for your needs. We will test the chimney and advise on the best flue system required. Should you order the stove and Install from Firebelly Stoves the site survey cost is refunded in full.

Requirements for Walls

The walls constructed around the stove must be of a non combustible material and must be at least 80mm away from the stove at any point. Safe distance from combustible material is a minimum of 500mm to rear of appliance and a minimum of 400mm to the side of appliance.

Accessories

Flexi Liner

QUATTRO-DS (Double Strip) is manufactured using two overlapping strips which are rolled and seamed together in a continuous process to provide a smooth inner liner and a corrugated durable outer case. The product has 5 convolutions between each seam. The seam is marked with directional arrows to indicate the direction of flue gas flow.

Twin wall flue system

The inner wall is manufactured from 316 grade stainless steel, the outer wall is made of 304 grade stainless steel. These two walls sandwich a 25mm thick layer of high density insulation.

The system is available in five standard diameters 125mm, 150mm, 180mm, 200mm and 250mm.

Vitreous Flue Pipe

Stainless Steel Flue Pipe

FB2 Double sided with logbox

Options

In addition to the wide range of colours, further options for the FB1, FB2 and FB3 stoves include:

Logbox available for single and double sided FB1, FB2, FB3 stoves.

The log box raises the height of the stove by 300mm and creates a convenient and safe place to store and dry fuel before it is loaded into the fire. The log box simply bolts to the base of the stove.

Multi-fuel kits available for single and double sided FB1, FB2, FB3 stoves.

The multi-fuel kit includes a grate to raise the fuel enabling combustion air to come up underneath the fire bed. This allows the stove to burn coal and solid briquettes. The grate is made up of durable solid 1" thick grate bars. The position of these grate bars can be rotated over time to ensure even wear and longevity. The generous ashpan slides discreetly between the legs of the stove and is neatly hidden from view when the stove door is locked.

Boiler only available for FB2.

The FB2 is available with a 27000btu (8kw boiler to be used for central heating and/or domestic hot water.)

Double Sided Stoves

The FB1, FB2 and FB3 are also available as a double sided stoves. The logbox and multi-fuel kit are also available for the double sided stoves. Note, all double sided stoves are now available with the option of opening doors to each side.

Brushed Stainless Steel Legs

The FB1, FB2 and FB3 are all available with brushed stainless steel as an option.

The Fire Pod

The Fire Pod encompasses the latest direct air supply technology (optional) which allows it to be fitted into modern sealed housing units without the need of an air brick.

FB2 Double sided with logbox

Colours

Actual colours may vary due to lighting & surface being painted
